                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This protein comprises Staphylococcus aureus collagen binding CDP protein (CBP) epitope M31, i.e. amino acids 61-343 of full-length CC BP, plus a vector-derived N-terminal peptide. Claimed 441, 849 cand 1500 bp nucleic acid sequences (see AAT93436-38) respectively commode CBP epitopes M17, M31 and M55 (see AAT93436-38) respectively commode CBP epitopes M17, M31 and M55 (see AAW31552-54) that confer commode CBP epitopes M17, M31 and M55 (see AAW31552-54) that confer composed commode CBP epitopes are contemplated in the creombinant production of the CBP composes. The CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to compose the composition of pathological infections including acids as well as claimed anti-CBP antibodies will also be of use in composition and methods for the prevention of composition in an animal such as a human. The CBP content are also contemplated for use in the preparation of concines and as carrier proteins in vaccine formulations, as well carriers in fection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                  protein (CBP) epitope M55, i.e. amino acids 30-531 of full-length CC CBP, plus a vector-derived N-terminal peptide. Claimed 441, 849 cand 1500 bp nucleic acid sequences (see AAT93136-38) respectively cencode CBP epitopes M17, M31 and M55 (see AAW31552-54) that confer protection against S. aureus infection. These nucleic acid sequences can be used in the recombinant production of the CBP cepitopes. The CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to collagen. The claimed nucleic acids as well as claimed anti-CBP antibodies will also be of use in corrections, diagnostic and therapeutic applications including active and passive immunisation and methods for the prevention of contemplated for use in the preparation of contemplated for use in the preparation of sein the formulation of compositions for the prevention of s.

                   The amino acid sequence (encoded by the sequence assembled from partially homologous pl6 and cCOLR6A inserts) comprises a structure resembling a signal sequence. Following this region, a region called A is found followed by a repetitive stretch of 187 amino acids called B1, B2 and B3. Directly following these regions there is a region called W which consists of a repetitive, hydrophilic

The amino acid sequence nearest to the C-terminal end consists of a long stretch of hydrophobic residues followed by some charged amino acids This region is called M.

The CBP can be used for immunisation pref. in combination with a fusion protein, e.g. for vaccination of ruminants against mastitis caused by staphylococcal infections. It can also be used to block infection in an open skin wound, e.g. for blocking protein receptors or by immunisation. In the latter, the host produces specific antibodies which block the adherence of the bacterial strains to damaged tissue. This treatment can be used for septic arthritis and tissue damage of e.g. skin, connective tissue, and mucous membranes. Dosage for immunisation is 0.5-5 microg CBP/kg; for topical admin. the protein is used at a concn. of 25-250 microg/ml.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein (CBP) epitope M17, i.e. amino acids 151-297 of full-length CBP, plus a vector-derived N-terminal peptide. Claimed 441, 849 c and 1500 bp nucleic acid sequences (see AAT93436-88) respectively encode CBP epitopes M17, M31 and M55 (see AAT931552-54) that confer protection against S. aureus infection. These nucleic acid sequences can be used in the recombinant production of the CBP epitopes. The CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to collagen. The claimed nucleic acids as well as claimed anti-CBP antibodies will also be of use in screening, diagnostic and therapeutic applications including active and passive immunisation and methods for the prevention of epitopes are also contemplated for use in the preparation of vaccines and as carrier proteins in vaccine formulations, as well as in the formulation of compositions for the prevention of S. aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Ace protein is an extracellular matrix-binding protein, which can bind with collagens such as collagen type 1 and type IV and with lamins. Ace protein can be used to inhibit attachment of enterococci to collagen and to treat or prevent enterococcal infections, specifically as a vaccine. The present sequence is the collagen binding domain of Ace protein.

(MSCRAMM) derivative pCF33, plus a vector-derived N-terminal peptide. The invention relates to claimed nucleic acid sequences (see AAF93436-38) encoding S. aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see AAW31552-54) that confer protection against S. aureus infection. CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to collagen. The epitopes are also contemplated for use in the preparation of vaccines and as carrier proteins in vaccine formulations, as well as in the formulation of compositions for the prevention of S. aureus infection. pCF33 and pDD (see AAW31556) were used to raise antends of the proteins and an aureus infection.
                                                                                                                                                                                                                                                                                                                                      Clostridium botulinum type G toxin C fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibody that interacts with collagen binding domain of Staphylococcal cna gene product - useful to prevent bacterial sepsis in animal infected with Staphylococcus aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1998-008801/01.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                against bovine mastitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This is the amino acid sequence of the histidine-tagged C fragment of Clostridium botulinum (113/30 strain) type G neurotoxin, encoded by a DNA sequence (see AAV30596) in planta perfilsb. This vector can be used to express BotG soluble C fragment in Escherichia coli host cells, with the recombinant C fragment being purified on an affinity column. The invention relates to recombinant proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Host cell containing recombinant expression vector encoding Clostridium botulinum type B or E toxin - useful to treat human; and other animals at risk of intoxication with clostridial toxin
Enterococcus faecalis;
detection; attenuation;
                                                 Enterococcus faecalis antigenic polypeptide fragment EF124.
                                                                                       20-APR-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents an antigenic polypeptide fragment isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screen compounds to identify agonists and antagonists of E. faecalis p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated Enterococcus faecalis polynucleotides - used products for the detection of Enterococcus and for use in for prevention or attenuation of Enterococcus infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a protein isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein
Enterococcus faecalis; infection; vaccine; detection; attenuation; antigenic.

                                            E.coli optimised KGF-2 mutant protein sequence.
                                                                                                                                                                                                    1073 ddngdvvvdidhsgghatgtkgkiqlkktamd 1104
                                                                                                                                                                                                                                                               1014
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   13-AUG-1996;
28-FEB-1997;
13-AUG-1997;
(I), which has antiulcer, antidiabetic, antiinflammatory, cytoprotective, dermatological, gastrointestinal, hepatic, respiratory, renal and cerebroprotective activity. (I) is useful for stimulating epithelial cell proliferation in patients suffering from wound, mucositis, ulcer such as venous statis ulcer, diabetic ulcer and cubitus ulcer. (I) is also useful for treating inflammatory bowel disease, liver disorder, lung damage, diabetes, oral injury, gastrointestinal injury, gut toxicity, gastric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antiinflammatory; cytoprotective; dermatological; gastrointestinal; hepatic; respiratory; renal; cerebroprotective; mucositis; treatment; epithelial cell proliferation; inflammatory bowel disease; lung damage; liver disorder; diabetes; oral injury; gastrointestinal injury; gut toxicity; gastric; duodenal; epidermolysis bullosa; skin graft; skin disorder; renal failure; brain injury; intestinal fibrosis; proctitis, female reproductive tract disorder; pulmonary fibrosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAB10309
                                                                                                                                                                                                    This invention describes a novel human keratinocyte growth factor, KGF-2
                                                                                                                                                                                                                                                            Example 7; Fig 15; 190pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ulcer, duodenal ulcer, epidermolysis bullosa, skin graft, skin disorder, renal failure, brain injury, breast tissue injury, urothelial damage, female reproductive tract disorder, intestinal fibrosis, proctitis, pulmonary fibrosis, pneumonitis, pleural retraction, hemopoletic syndrome and myelotoxicity. (I) is also useful for increasing the adherence of skin grafts to wound beds and to stimulate re-epithelialization from the wound bed, to produce changes in hepatocyte proliferation, to reduce the side effects of gut toxicity, to regenerate skin in full and partial thickness skin defects, and to prevent and heal damage to lungs. KGF-2 shows enhanced activity, increased stability, higher yield and better solubility. This sequence represents the human KGF-2 protein construct pQE60-Cys37 described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Unidentified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Keratinocyte growth factor; KGF-2; epithelial cell proliferation; wound; mucositis; ulcer; inflammatory bowel disease; liver disorder; lung damage; diabetes; oral injury; gastrointestinal injury; epidermolysis bullosa; renal failure; brain injury; proctitis;

The present sequence is a KGF-2 construct protein, which was generated in the present invention. KGF-2 can be used to stimulate epithelial cell proliferation in a patient, where the patient has a wound, mucositis, an ulcer, inflammatory bowel disease, liver disorder lung damage, diabetes, oral injury, gastrointestinal injury, gut toxicity, epidermolysis bullosa, skin graft, skin disorder, renal failure, brain injury, breast tissue injury, urothelial damage, female reproductive tract disorder, intestinal fibrosis, proctitis, pulmonary fibrosis, peunrumonitis, plural retraction, haemopoletic syndrome, and myelotoxicity. In addition, KGF-2 can be used in the treatment or prevention of ovary injury, infertility, or fibrosis of the liver. KGF-2 also promotes internal healing, donor site healing, internal surgical wound healing or healing of incisional wounds made during
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A polynucleotide encoding the human keratinocyte growth factor useful for stimulating epithelial cell proliferation in a patients that has e.g a wound \dot{\,}
